# TRACH-VAC SUBGLOTTIC SUCTION ENDOTRACHEAL TUBE WITH FLEX-TIP™

LATEX FREE | SINGLE PATIENT USE | DISPOSABLE

Incorporate the ease of Flex-Tip™ to your most challenging ICU intubation events and reduce intubation time and insertional trauma for your most vulnerable patients. 6-28% of ICU intubations are rated as "difficult"[1]. Subglottic suction endotracheal tubes are proven to decrease VAP rates in ventilated patients and the flex tip makes for less traumatic insertions and increases "first pass success"[2] rates.

Dual Murphy Eyes aid in collateral gas flow

Tapered and centered Flex-Tip glides safely along airway anatomy

Subglottic suction port affixes to continuous or intermittent suction devices

Atraumatic Flex-Tip

Subglottic suction port inside the tube

Available with durable PVC Cuff or ultra-thin Polyurethane Cuff

FLEX-TIP™ Endotracheal Tube Tip

STANDARD Endotracheal Tube Tip
